

PROGRAM OVERVIEW

Barkrum Cybersecurity Protection Program

Compliance is not a one time event. Your program should not be either.

The Barkrum Cybersecurity Protection Program, or BCPP, is our managed annual program for organizations that want their compliance and security handled on a schedule rather than scrambled for once a year. **It bundles the assessments, testing, and reporting your organization needs into a single ongoing engagement, delivered on a recurring cycle.**

Why a program, not a project: *regulations recur, threats evolve, and auditors and insurers increasingly expect an ongoing, documented program rather than a one time check. BCPP keeps your posture current and your evidence ready, so compliance becomes a standing capability instead of an annual fire drill.*

WHAT THE PROGRAM INCLUDES

Included in the program	What it delivers
Annual assessment	Your core compliance assessment each year, whether HIPAA, CJIS, or a framework review, refreshed to reflect changes in your systems and the rules.
Penetration testing	Annual technical testing that validates your defenses in practice, not just on paper, and strengthens every assessment finding.
Recurring vulnerability scans	Scheduled scans through the year that surface new technical exposures between assessments.
Ransomware readiness check	A focused mid cycle review of your readiness against the most likely and most damaging attack, useful evidence for cyber insurers as well.
Program reporting	Clear, scheduled reporting you can put in front of leadership, auditors, and insurers, with findings tracked and remediation progress documented.

WHY ORGANIZATIONS CHOOSE BCPP

- **Compliance handled on a schedule.** The work is planned and recurring, so nothing is left until an audit or a renewal forces it.
- **One relationship, not many.** A single program covers assessment, testing, and reporting, delivered by the practitioner who knows your environment.
- **Audit and insurer ready.** Documented, up to date evidence is on hand when a regulator or an insurer asks to see it.
- **Independent authority.** Led by a Certified Information Systems Auditor, providing the third party independence a self assessment cannot supply.

Make Compliance a Standing Capability

Start with a single assessment, or build the full program from the outset. Either way, BCPP turns compliance from an annual scramble into a managed, year round program. A fixed scope and a fixed annual fee, set after a brief scoping conversation.
